Oblig 2b) MDI – ModelDriven Interoperability

Write a description on how you could use an MDI (Model Driven Interoperability, ref. latest lectures) approach in order to deal with semantic and technical interoperability – when integrating your designed part of the Smart House system with an existing system.

Voluntary extension parts for potential discussion:

- Model driven user interfaces (Applause) for iPhone/Android - http://www.ralfebert.de/blog/xtext/applause_new_app/
- Lego NXT-G domain specific language for sensors and actuators – describe how you could have related to models in the NXT-G language - http://www.ortop.org/NXT_Tutorial/

Could any of the model based approaches be useful for your Oblig 2 work?
