

Conduct a risk analysis using the CORAS tool by carrying out the seven steps of the CORAS method (A) as described in Chapter 2 of the CORAS handbook;  
(B) using the modelling guideline described in the appendix of the cORAS handbook.

It is the responsibility of each group to define target and risk evaluation criteria in such a way that there are at least four risks (but not much more than four due to the workload) that do not satisfy the risk evaluation criteria.
