

## JUS5690/JUR1690 Robot Regulation

Individual student paper 2018

Please discuss a specific use case for robotics (including soft bots) considering a selection of legal/regulatory/ethical issues. If relevant, a brief description of the robot use can take be based on the five dimensions of robots highlighted by Leenes et al (2017). Your paper should primarily focus on the analysis of legal/regulatory/ethical issues, such as considerations de lege lata or de lege ferenda. Your analysis should be written as a contribution to the discourse about robot regulation in literature and policy-making.
