JUS 5650 Cybersecurity Regulation

2018

Term paper task

Discuss the aims and regulatory approaches of three regulatory instruments mentioned in this course, also considering relevant cybersecurity practices of IT practitioners. If one of the chosen instruments discusses several different regulatory issues (such as security and privacy), please focus on security. Feel free to illustrate your analysis with cases (related to cybersecurity or cybercrime) discussed in the media.

Notes:

1. An earlier version of this task was introduced during the first lecture. The update reflects questions received from students, and limits the attention given to cybersecurity practices of IT practitioners.
2. A list of regulatory instruments is available in Canvas.
3. Please submit a draft paper by 5 March and a final paper by 2 May, as further instructed on the course website.
