

Weekly assignment for week 7 (04/03/16) AST3220

Mandatory hand-in-assignment

Your solution of the mid term exam sets given in AST4220 October 2006 and spring 2012. The important point of this assignment is for you to gauge your knowledge before the mid term exam. Therefore we strongly recommend that you compile your own independent solution. Pretty much any attempt at a solution handed in on time will be accepted.

You have time until the class on Friday, and you can leave it any time in Lluís' post-box (Lluís Mas Ribas, ground floor, next to the printers – main entrance to the right), you can give it to him in office 106, e-mail it (lluismasribas@gmail.com) or on Friday during the class. (understandable hand-writing is appreciated).

In class, we will take a look at these two exams and will do more!

Bonus problems from universeinproblems.com

All problems from the section *Solutions of Friedman equations in the Big Bang model*.
