Other reasons? Please specify below

- Good way to learn what to look for and be critical about in scientific papers. Little practice on this in other courses, so this course gives you a good basis. Also, giving a presentation about a subject/paper is good practise for later presentations as well.

Additional comments

If you have additional comments about the course, please specify:

- Everything was very good. But going into season two, some more structure would be nice. But at the same time, don't let that inhibit the flexibility of the course that makes it more informal and makes a better teaching environment for this kind of class.
- An exam may have been a little excessive. I would have enjoyed some discussions about the topics as well as the methods discussed for each paper.
