

## Learning to learn

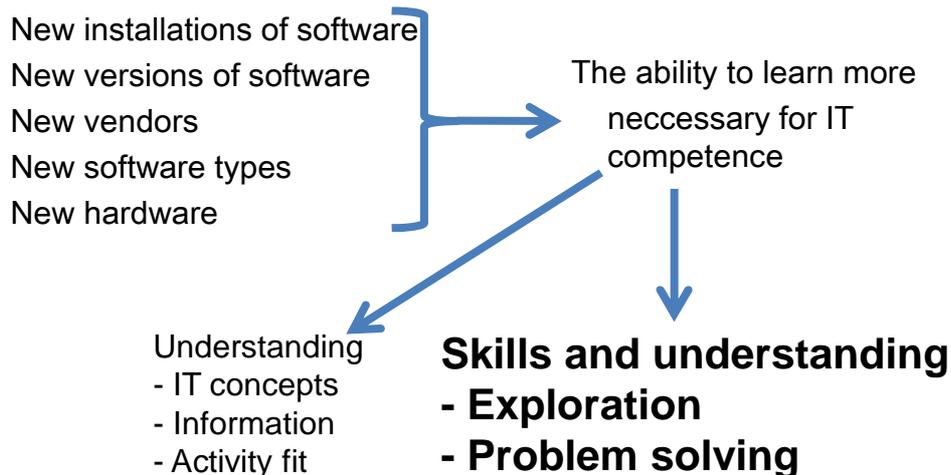

- Aim
  - To be able to design activities where people can become better learners of IT
  - Input for Assignment 3
- Core literature:
  - Textbook chapter 6, 7.2, 7.4, 8.1
- Additional literature
  - Grigoreanu et.al.(2012). End-user debugging strategies: A sensemaking perspective
  - Novick, Elizalde & Bean (2007) Toward a more accurate view of when and how people seek help with computer applications.

Write down 1-3 ways in which you solve IT use problems.

1

## Because

2

## Levels of IT user competence

- 
- Knowing how to learn** *meta = about  
cognition = thinking*
- Metacognition
  - Exploring
  - Problem solving competence
  - Higher order cognitive skills
- 
- Understanding**
- Explaining to others
- 
- Skills**
- Doing

3

## Characteristics of "capable computer users"

- 
- confident in their own skills and abilities
  - patient and persistent, determined and calm
  - risk taker, courage to experiment, try new things, not afraid to make mistakes
  - methodical / logical thinker
  - enthusiastic and motivated, enjoy using computers, positive attitude, personal interest
  - technical knowledge
  - love of learning
  - constant use, deep immersion
  - problem-solving abilities, deduction
    - Phelps et al (2001) The role of metacognitive and reflective learning processes in developing capable computer users

4

### Learning oriented people

- My brother is truly amazing. For myself, if something doesn't work I might try it again once but the majority of the time I will just 'give up'. My brother sees these 'failures' as challenges to be met and conquered. He delights in the fact that he never has to stop learning because there will always be a new challenge to conquer. He loves the fact the information technology is such a dynamic field that it is always changing, improving and making new breakthroughs.

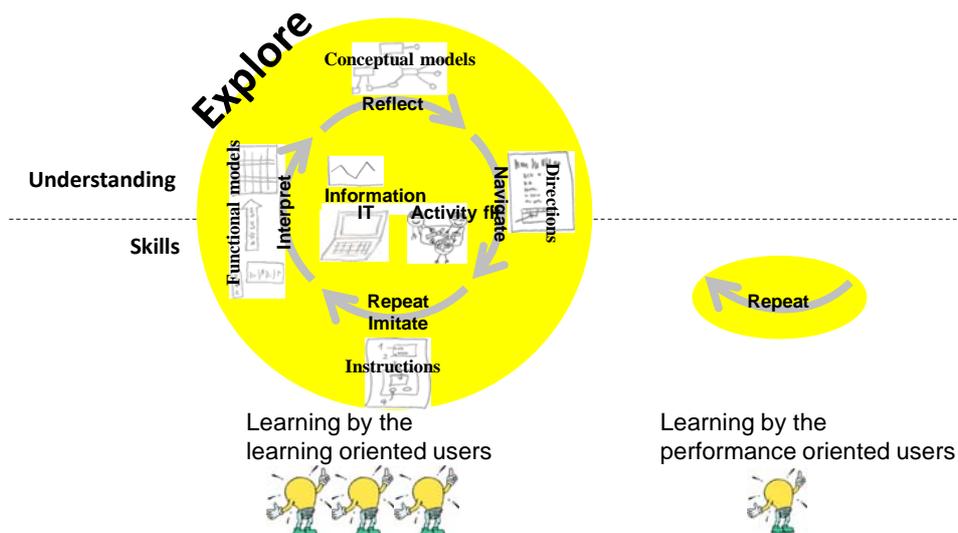

Phelps et al (2001) The role of metacognitive and reflective learning processes in developing capable computer users

### Performance oriented people

- If something goes wrong when I am using the computer I freak out and panic, but when I see these people use the computer they seem to be able to work it out on their own. It is obvious to me that I learn differently to them when it comes to information technology.

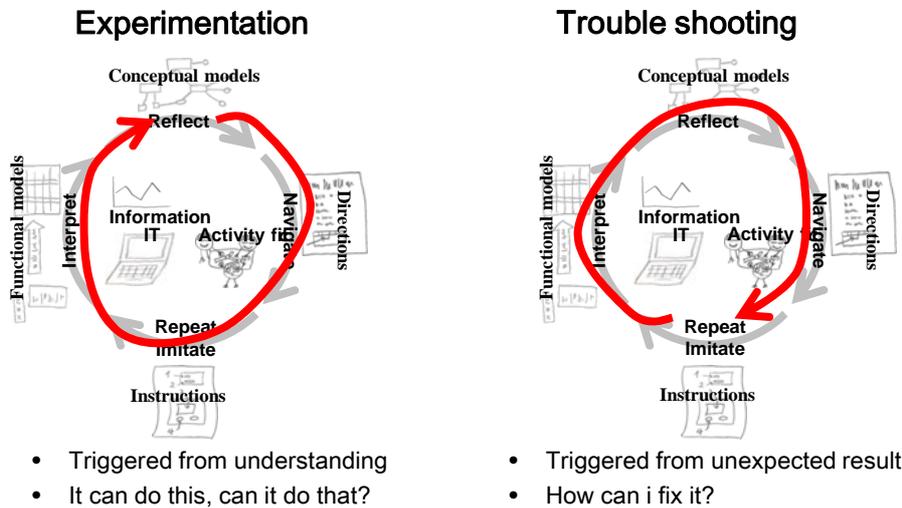

5

6

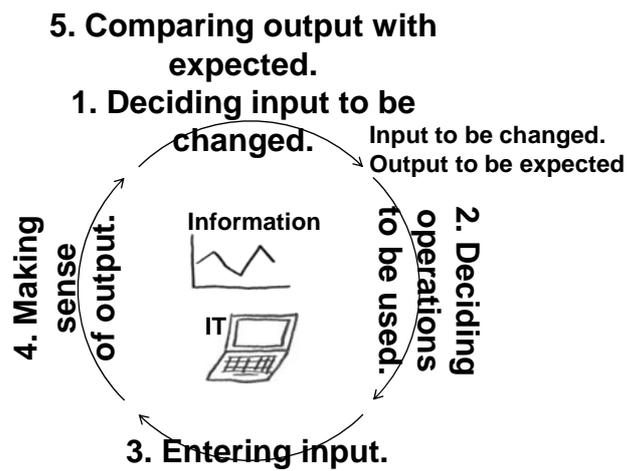

## Two types of problem solving

7

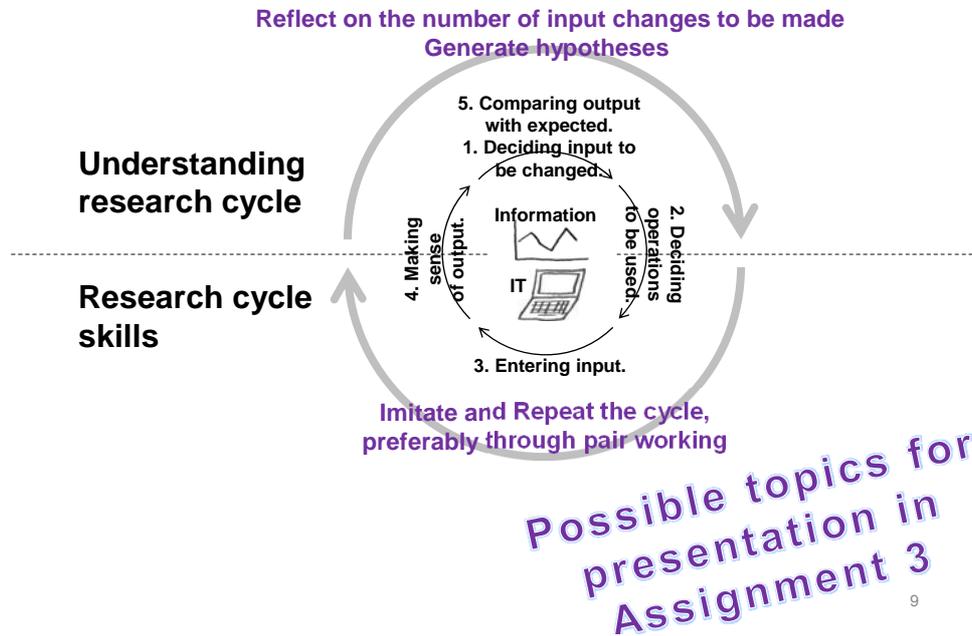

## Research cycle

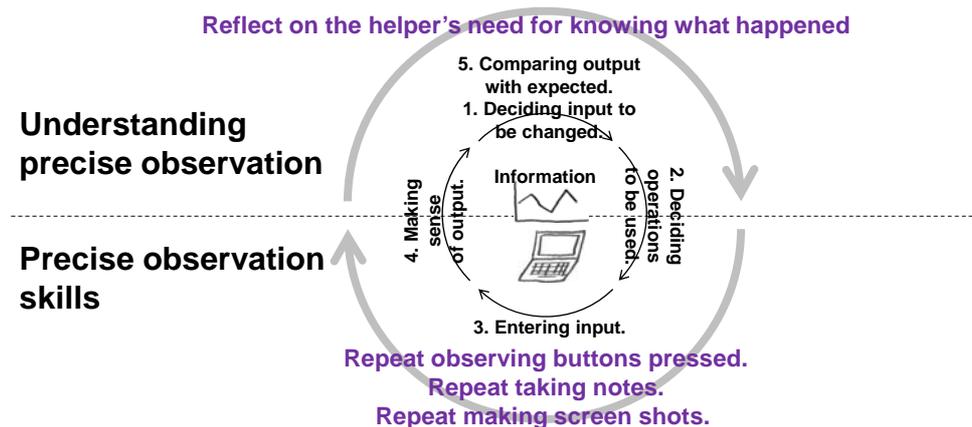

8

## Learning research cycle competence

## Learning precise observation

## Guiding precise observation

This worked last time, why did the computer do something else now?

No worries. Start over again. Go slowly and observe precisely what you are typing.

You know, I often mistype myself. That is normally the reason why surprising things happen on the screen.

Trainer referring to own mistakes  
 → Learner understands that he is not stupid

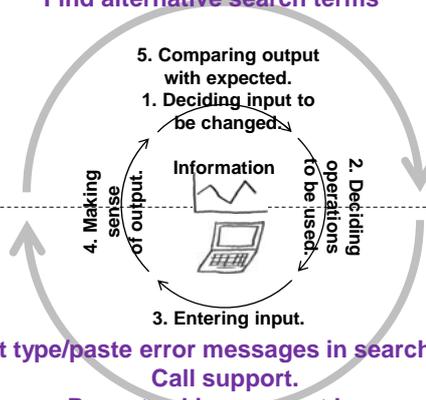

11

## Learning information search and help seeking

Interpret and reflect upon explanations from inline help and web  
 Find alternative search terms

Understanding information search

Information search skills

Repeat type/paste error messages in search engine.

Call support.

Repeat asking support how

Repeat asking support why

12

# Efficiency

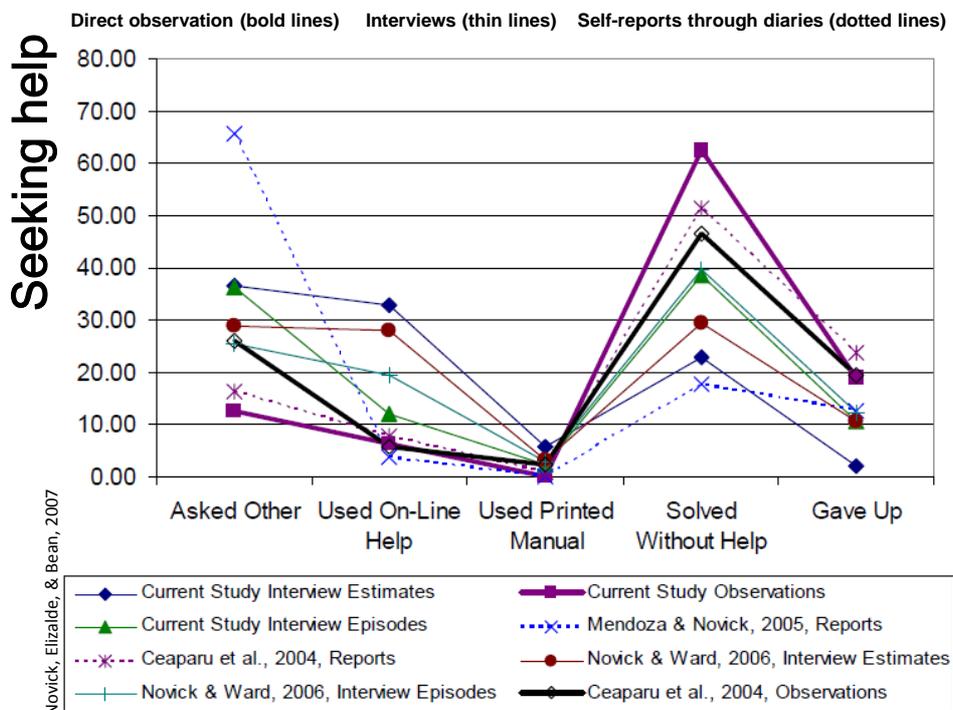

- **Inefficient**
  - Trial-and-error
  - Consulting documentation
- **More efficient**
  - Switching between trial-and-error and documentation

Andrade, et al., 2009

Reviewing training material is **twice** as successful as searching for help  **Same material in training and documentation**

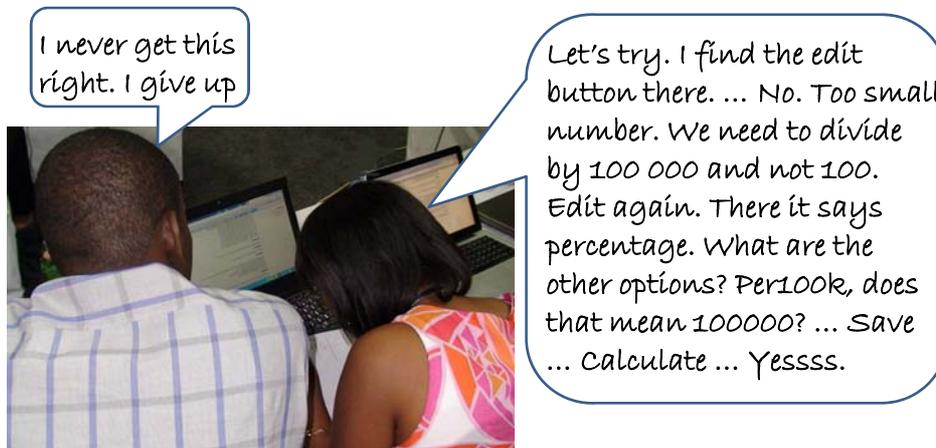

Novick et al 2009

13

## Self-efficacy

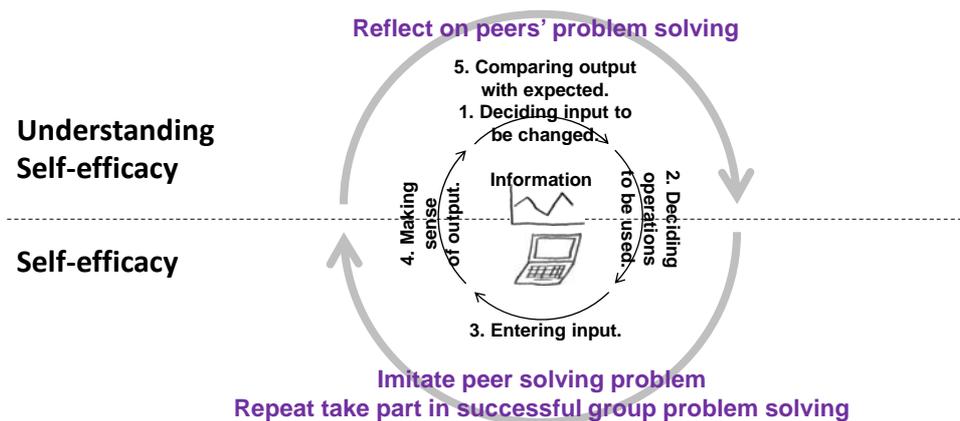

- Strength of one's belief in one's own ability to complete tasks and reach goals

Watching a peer struggle and succeed is the best way of strengthening self efficacy

15

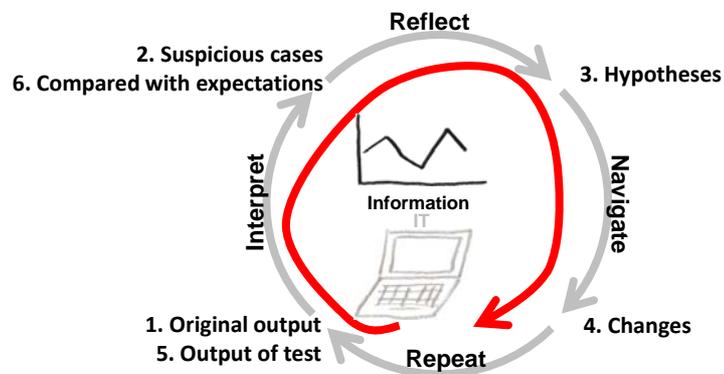

## Improving self-efficacy

16

## Debugging spreadsheets

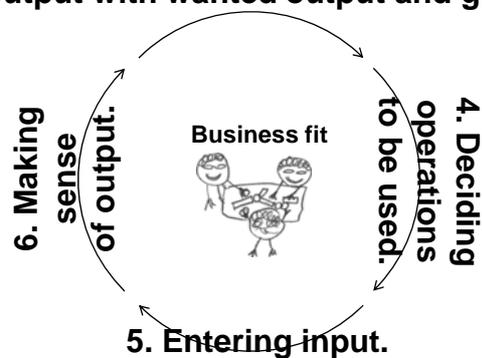

See Grigoreanu et.al.(2012)

17

## Work around

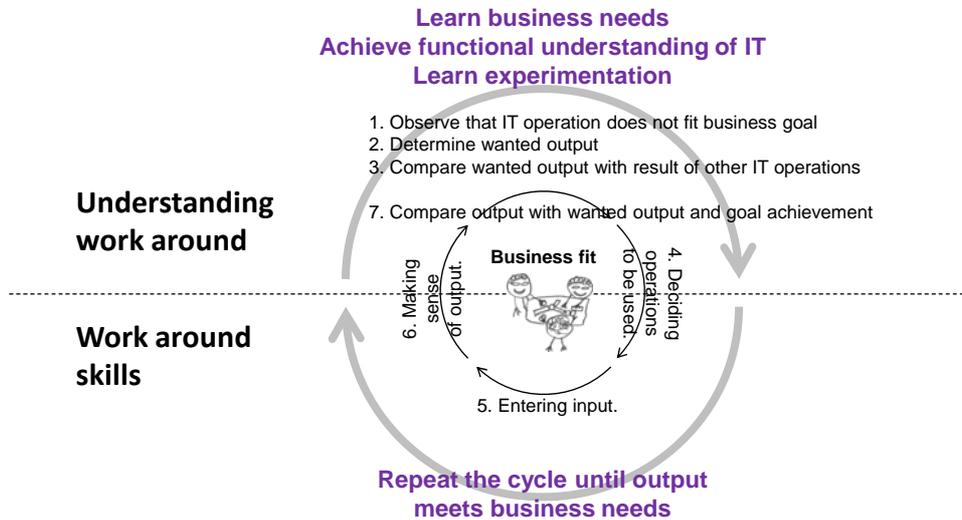

1. Observe that IT operation does not fit business goal
2. Determine wanted output
3. Compare wanted output with result of other IT operations
7. Compare output with wanted output and goal achievement

18

## Learning work around

19

## Misfits business–IT which require software people

- April 2
- Chapter 15. Mutual learning during fitting IT to business

Which additional methods for problem solving did you write down in the beginning of the lecture?.
