## Summary of mid-term evaluation of MAT4540

**Question: "Continue to/do more of"** One student would want to see more material from outside the scope of the literature.

**Question: "Improve on/do less of"** Two students commented that they do not particularly like Hatcher's book and would want the lectures to be less tied to it.

**Question: "I have learned/benefited from this"** One student enjoyed going through Poincare duality while another one thinks there have been interesting digressions in the lectures. One student think the lecturer is clear and precise when delivering the material.

**Question: "I would like to see"**

- Steenrod operations
- More examples
- Vector bundles

The general feeling of the feedback is that most students enjoy the course, in particular the part of the lectures that expand on, or deviate from the book.
