**Menti-links from the Seminar in Pediatric Cardiology**

**Dear students**

Big thanks for your contribution! Thanks also for very positive feedback and suggestions from some of you. It is well known that group work improves the learning effect of cases, and I encourage company if you intend to review the contents below. (There is a recording from the second part of the seminar, but the cases, the quiz and discussions are omitted.)

Cases written in bold text below were used in the seminar but all below are available. The codes are active until 07.11.24, but you don't get animations and/or sounds via Menti. Laptop works better than telephone. 😊

- **Quiz** 5246 5648 https://www.menti.com/tmgo3czk8g
- Case "A heart on fire" 2992 5438 https://www.menti.com/1k32jrq9ix
- **Case "It must be a camel"** 3513 5783 https://www.menti.com/alpf5h9kf1tb
- **Case "Running around in circles"** 2548 7131 https://www.menti.com/gx1i5ab4kh
- Case "Double up" 2742 4644 https://www.menti.com/alcib1iodb8t
- Case "Get up, stand up" 6991 2671 https://www.menti.com/4uisqhibog

**You find the intended learning on next page and answers on page 3!**

(The names of the cases are songs/tunes, and by listening to the suggested artists' versions, you will encounter a broad range of impressions…)

Regards, Henrik

**Menti-links from the Seminar in Pediatric Cardiology**

## Learning from case «A heart on fire…»

- Interpretation of symptoms/findings
- Handling of a common incidental finding
- Incidental findings are usually less urgent than presentation by symptoms
- Beware of the tracks you make by your advices!

Little Simz

## Learning from case «It must be a camel…»

- Things are not always as they seem! (Look up WYSIATI…)
- This case includes acute symptoms of bronchiolitis (incl. desaturation) added to heart failure symptoms
- Heart failure symptoms are unspecific
- Co-morbidity may obscure clinical pictures
- Heart defects may present during infections

Frank Zappa

## Learning from case «Running around in circles…» and «Double up»)

- Reflection on different anatomies
- Neonatal pathophysiology; a duct-dependent pulmonary circulation in the first case
- The second case illustrates one of the few situations with combined heart failure and cyanosis
- Prediction of symptoms from a hemodynamic background

The Speroners

Lady XO

## Learning from case «Get up, stand up…»

- Typical symptoms of reflex-syncope, a common functional disorder
- ECG showing respiratory sinus arrhythmia
- Aviodance of unnecessary examinations
- Red flags indicating increased risk

Bob Marley
