Check list – clinical teaching - Module 6

In this module there are a number of activities that require extra attention from the students, in addition to the slots in your time schedules.

You will have individual rotation for some teaching and for some of these you sign up at a time that suits you.

Please make a note of the following:

Gynecology and Obstetrics

- **Labour Ward (labour week)**

Students will receive information by email some time prior to their labour week with rotation which will not correspond with the time schedule.

- **Gynaecology Outpatient Clinic infertility (Ullevål stadion)**

In your schedule there's a small group session called «KLIN.SMÅGR: Gynaecology Outpatient Clinic. Infertility. Ullevål stadion». As it says in your calendar, this lesson is replaced by a clinical shift that everyone has to book themselves. The individual

lesson has to be in the same week as the small group that it replaces, but the exact day and time you decide based on your schedule and what is available in the booking calendar. The calendar is updated as the weeks go by, and you will be able to book your session as we get closer to the relevant week. Info and calendar: https://www.uio.no/studier/emner/medisin/med/MED5600/Reproductive-endocrinology-and-infertility/

Click on links to the in your time schedule for more information.

- **Antanatal Outpatient Clinic Ahus (svangerskapspoliklinikken)**

Time might differ from the scheduled time slot. You will receive information by mail from your teacher with rotation.

- **Gyn Outpatient Clinic Ahus**

The groups will receive an email at the beginning of the semester with a suggestion of rotation to 3 outpatient clinics.

- **Gyn Outpatient Clinic Ullevål**

Time might deviate from Mine studier within the same week. The local coordinator will send an updated message the week before the clinic with time slots. Due to limited rooms and patients they have to adjust individually within the set week.

One session at Ullevål may be replaced with a session at Sex & Samfunn.

GYN OUTPATIENT AT SEX & SAMFUNN - not relevant for everyone!

For some groups, one of the «gynecology outpatient clinic»-sessions at Ullevål is replaced by an individual session at Sex & Samfunn. There are limited spots available, so this is only relevant for groups who have this marked in their calendar. *There will be a message in MineStudier for the groups this concerns with information about booking*. It also says in your calendar.

Dresscode and lockers for the clinical rotations in obstetrics/gynaecology at Oslo University Hospital, location Ullevål

Radiumhospitalet - Changing facilities and lockers

Paediatrics

1. PED PATIENT RECORDS IN THE ER (journal i akuttmottak)

Book three shifts in the ER for 9-16 or 16-22. Maximum two students in the ER at a time, one patient each. For correction from the teachers, the record is printed out on paper and patient ID is removed (!) before you place it in the designated shelf. Fill in test results from the ER afterwards if it´s not done when you leave. Come back to find the corrected record after +/- 10 days. The teachers will keep track of your record approvals, so there's no need to keep it for proof.

2. PED CASE MEETING

In your calendar you'll find a session called «case meeting» where 3 groups meet to present short cases from the pediatric ward/sengepost. All students will present cases in pairs that you organize yourselves (amongst the students who have the same case meeting as you of course). Before the day of the case meeting, the student pair find a patient in the pediatric ward and write an anonymous patient record together in Word. It is recommended to use a patient from the pediatric ward (sengepost) and not ER, to get a more complete case. You can show up to the ward and ask for help to find a fitting patient or ask your teacher if a patient from your small group teaching could be relevant (return to the patient later). Go to the hospital where you have DIPS admission! The anonymous record is delivered to your case meeting teacher, either by mail or as a printed copy the day of the meeting. Remember not to send patient data by mail. See more info in the link above and in the intro lecture from the first day of the semester. They will also send out information about the meeting itself in advance.
