19–20 August 2026

2. Clinical small-group teaching

At Ahus, Rikshospitalet and Ullevål — 10 sessions total

3. Completing hospital admission notes

4. Case meeting

5. Pediatric CPR training

COMPONENT 1 OF 5

UNIVERSITETET I OSLO

Introductory Course in Pediatrics

WHEN

19–20 August 2026

Ferdighetssenteret, Building 10

THE GOAL

Learn practical pediatrics tools to use in the clinic.

FIVE STATIONS

1. Critical ill child
2. Newborn examination
3. Neurological examination
4. Growth and Puberty
5. Pediatric Essentials: ENT, Urine, Access

UNIVERSITETET I OSLO

Clinical Small-Group Teaching

Ten sessions spread across three teaching hospitals — your regular ward-based clinical training.

Ahus

Pediatric ward	× 2
Newborn exam / NICU	× 1

Ullevål

Pediatric ward	× 2
Newborn exam / NICU	× 1

Rikshospitalet

Pediatric ward	× 2
Newborn exam / NICU	× 1

+ Voksentoppen

Centre for Asthma & Allergy — × 1

10 sessions in total — 6 pediatric ward + 3 newborn/NICU + 1 Voksentoppen.

UNIVERSITETET I OSLO

Pediatric Hospital Admission Notes

Ahus / Ullevål

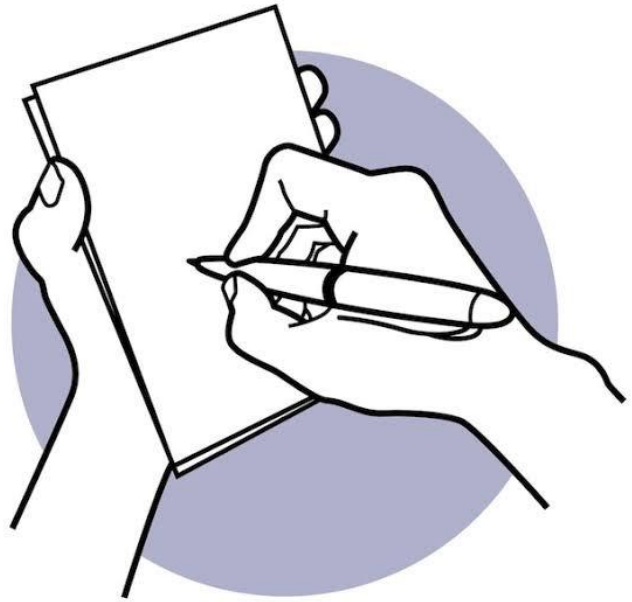

Pediatric Emergency Department

3 records

Ahus / Ullevål / Rikshospitalet

Pediatric Ward (Case Meeting)

1 record

All 4 patient records must be handed in and approved before you can take the exam. **Deadline: 1 December 2026.**

UNIVERSITETET I OSLO

Admission Notes — Booking in the Calendar

LOCATIONS

Group 1–10 at Ahus

Group 11–30 at Ullevål

SIGN UP

Book your slot via the TeamUp Calendar:

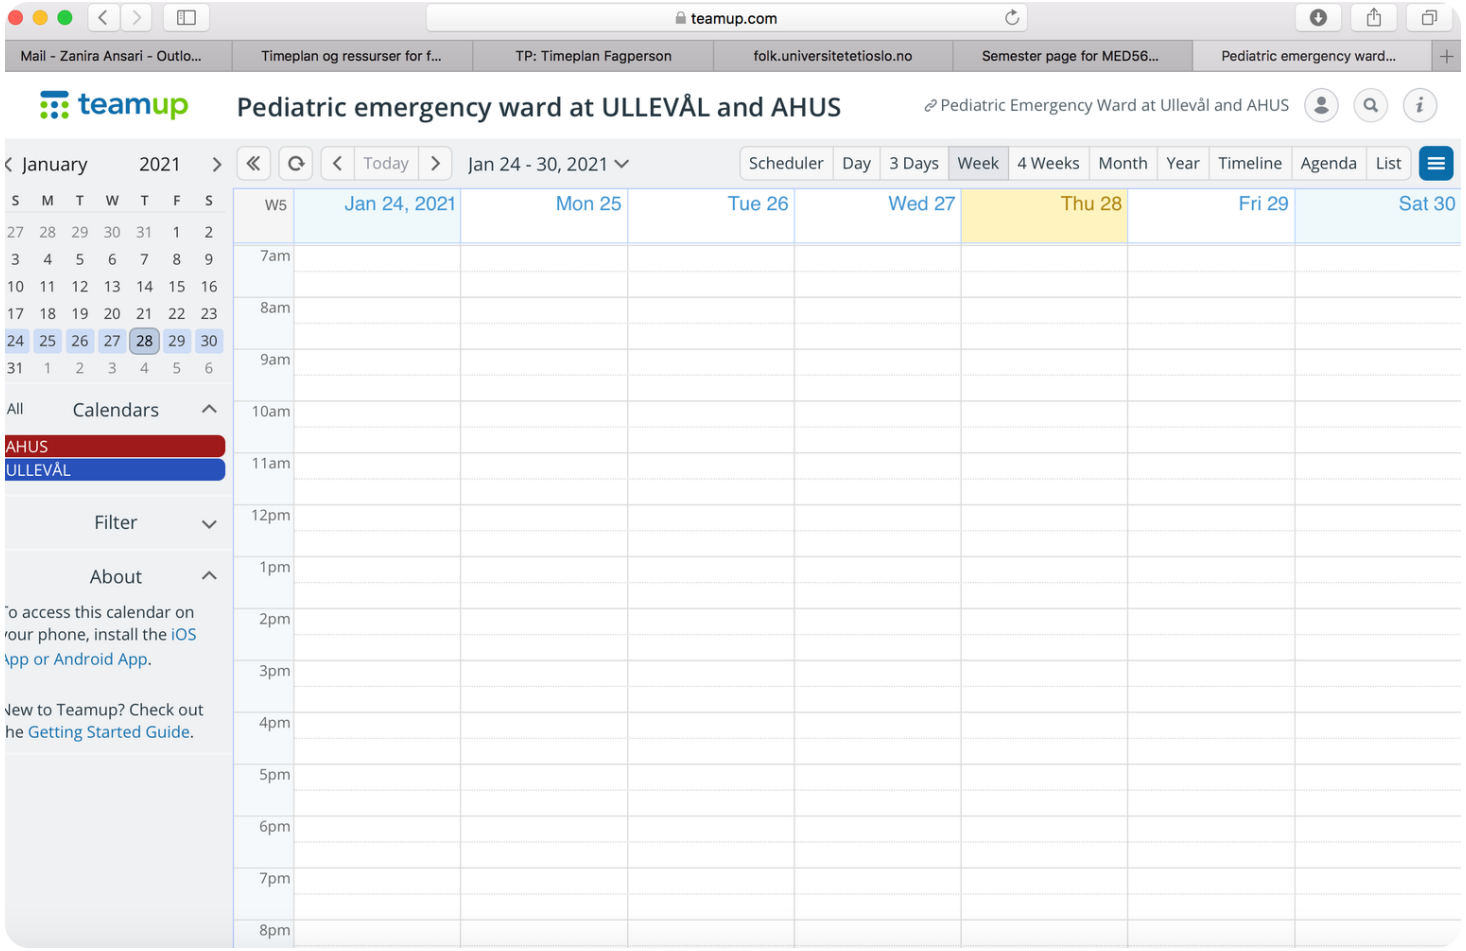

teamup.com/ksk7kstfqk6236anj4

Maximum of two students at the same time in the acute assessment wards.

Pediatric emergency department sessions

1) 9am – 4pm

2) 4pm – 9pm

Until the end of next week, students are only allowed to book two sessions each.

UNIVERSITETET I OSLO

Hospital Admission Notes

1

Book & see a patient

Sign up via the TeamUp calendar (max 2 students per slot). Take a full history and examine the patient.

2

Write it up

Norwegian students: “Innkomstjournal SO” in DIPS. Exchange students: Word document. Always use the standard template.

3

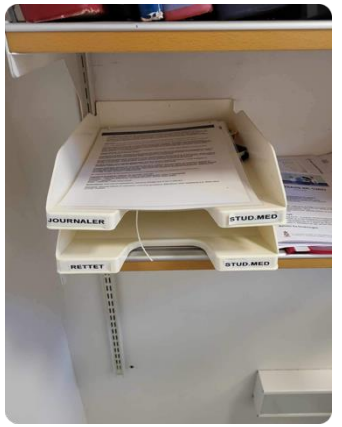

Hand it in

Print, remove all patient ID with the scissors provided, and hand it in at the designated box.

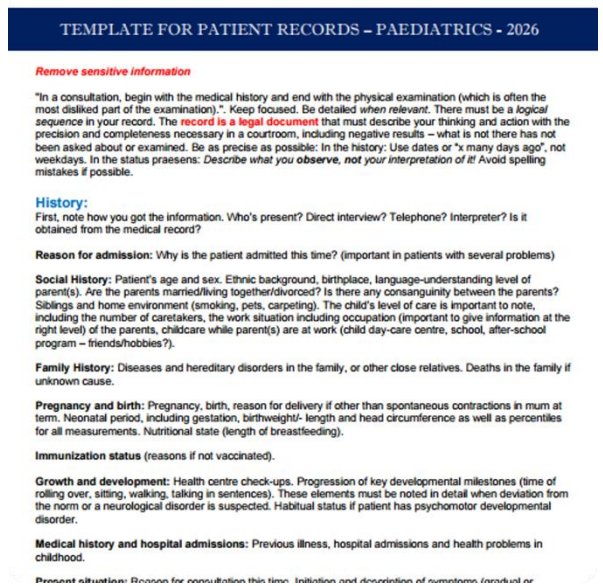

4

Get it corrected

Allow about 10 days. Pick up your corrected note and review the feedback carefully.

The real hand-in tray

TEMPLATE FOR PATIENT RECORDS – PAEDIATRICS - 2026

Remove sensitive information

"In a consultation, begin with the medical history and end with the physical examination (which is often the most disliked part of the examination).". Keep focused. Be detailed *when relevant*. There must be a *logical sequence* in your record. The **record is a legal document** that must describe your thinking and action with the precision and completeness necessary in a courtroom, including negative results – what is not there has not been asked about or examined. Be as precise as possible: In the history: Use dates or "x many days ago", not weekdays. In the status praesens: *Describe what you* ***observe***, ***not*** *your interpretation of it!* Avoid spelling mistakes if possible.

History:

First, note how you got the information. Who's present? Direct interview? Telephone? Interpreter? Is it obtained from the medical record?

Reason for admission: Why is the patient admitted this time? (important in patients with several problems)

Social History: Patient's age and sex. Ethnic background, birthplace, language-understanding level of parent(s). Are the parents married/living together/divorced? Is there any consanguinity between the parents? Siblings and home environment (smoking, pets, carpeting). The child's level of care is important to note, including the number of caretakers, the work situation including occupation (important to give information at the right level) of the parents, childcare while parent(s) are at work (child day-care centre, school, after-school program – friends/hobbies?).

Family History: Diseases and hereditary disorders in the family, or other close relatives. Deaths in the family if unknown cause.

Pregnancy and birth: Pregnancy, birth, reason for delivery if other than spontaneous contractions in mum at term. Neonatal period, including gestation, birthweight/- length and head circumference as well as percentiles for all measurements. Nutritional state (length of breastfeeding).

Immunization status (reasons if not vaccinated).

Growth and development: Health centre check-ups. Progression of key developmental milestones (time of rolling over, sitting, walking, talking in sentences). These elements must be noted in detail when deviation from the norm or a neurological disorder is suspected. Habitual status if patient has psychomotor developmental disorder.

Medical history and hospital admissions: Previous illness, hospital admissions and health problems in childhood.

Patient record template

NOTE: Remember to remove the patient’s ID from the document before you hand it in! If this is not removed, we will not correct it and will ask you to do a new journal.

UNIVERSITETET I OSLO

Case Meeting

How two students turn a ward patient into a presentation.

1 Two students cooperate

2 Find an interesting patient at the pediatric ward, take the patient history, do a full clinical examination and write the pediatric admission record.

3 Present the patient history and the case for your fellow students at the Case Meeting. (15–20 min)

UNIVERSITETET I OSLO

COMPONENT 5 OF 5

Pediatric CPR Training

Hands-on resuscitation practice in the end of the semester
