

Summary – evaluation of Sosgeo 2800

- Students happy to be back in the auditorium. There were some technical problems with hybrid solution, but better than digital only. Some would want the lectures to be recorded for use afterwards.
- Some happy also about the digital teaching.
- Interesting topics and good teaching – but some teachers are too tied to the syllabus. Little extra information.
- Interesting syllabus. Good combination of theory and empirical stuff. Not too much reading.
- Too much reading! Sometimes difficult to know how to read to be prepared.
- Happy with small student discussions during lectures.
- Some repetition between lectures. Could have been avoided to have more time for new information.
- Some teachers repeat what is on the foils. Unnecessary.
- Want seminars! Should be given priority! Not sufficient follow-up of student along the way.
- Too much emphasis on destination countries. Should have been more on sending countries and the relationship between the two. Too much student opinion. Too liberal time-use on single students. Would rather listen to the teacher.
